### COS

Camera Observation System (COS) to confirm and verify an alarm input from PIDS/EF system.

### Welded mesh SR1

Strong and flexible mesh panel outer perimeter protection solution. SR1 rated to resist continuous forced entry/escape attempts with a standard toolset for at least 1 minute, giving ample time for guards to react.

### Welded mesh SR3

Triple-skin mesh fence system is an extremely strong and effective anti-climb fence with a very high security rating (SR3). The tightly configured mesh prevents toe or finger holds making it extremely difficult for prisoners to escape. Also effective in preventing contraband objects being passed through.

### Sliding gate

Strong welded steel sliding gate providing within the inner perimeter, yet providing good level security for unwanted trespassers.

### PIDS

Perimeter Intrusion Detection system (PIDS) is an electronic system deployed at the fenceline as an early warning of an attack at the perimeter.

### Speed gate

Fast opening and closing speed allows speedy entry or exit for authorised and emergency vehicles. Combined with road blocker and HVM barrier to protect against heavy vehicle intrusion.

### Road blocker

Maximum security against unauthorised vehicles of all sizes and weights for highly sensitive entry points.

### HVM Barrier

This heavy-duty arm barrier is ideal for high security and high-frequency access locations.

### Electric fence

This is a physical shock deterrent to stop potential intruders and dissuade them from attempting to breach the perimeter.
