## Warehouse

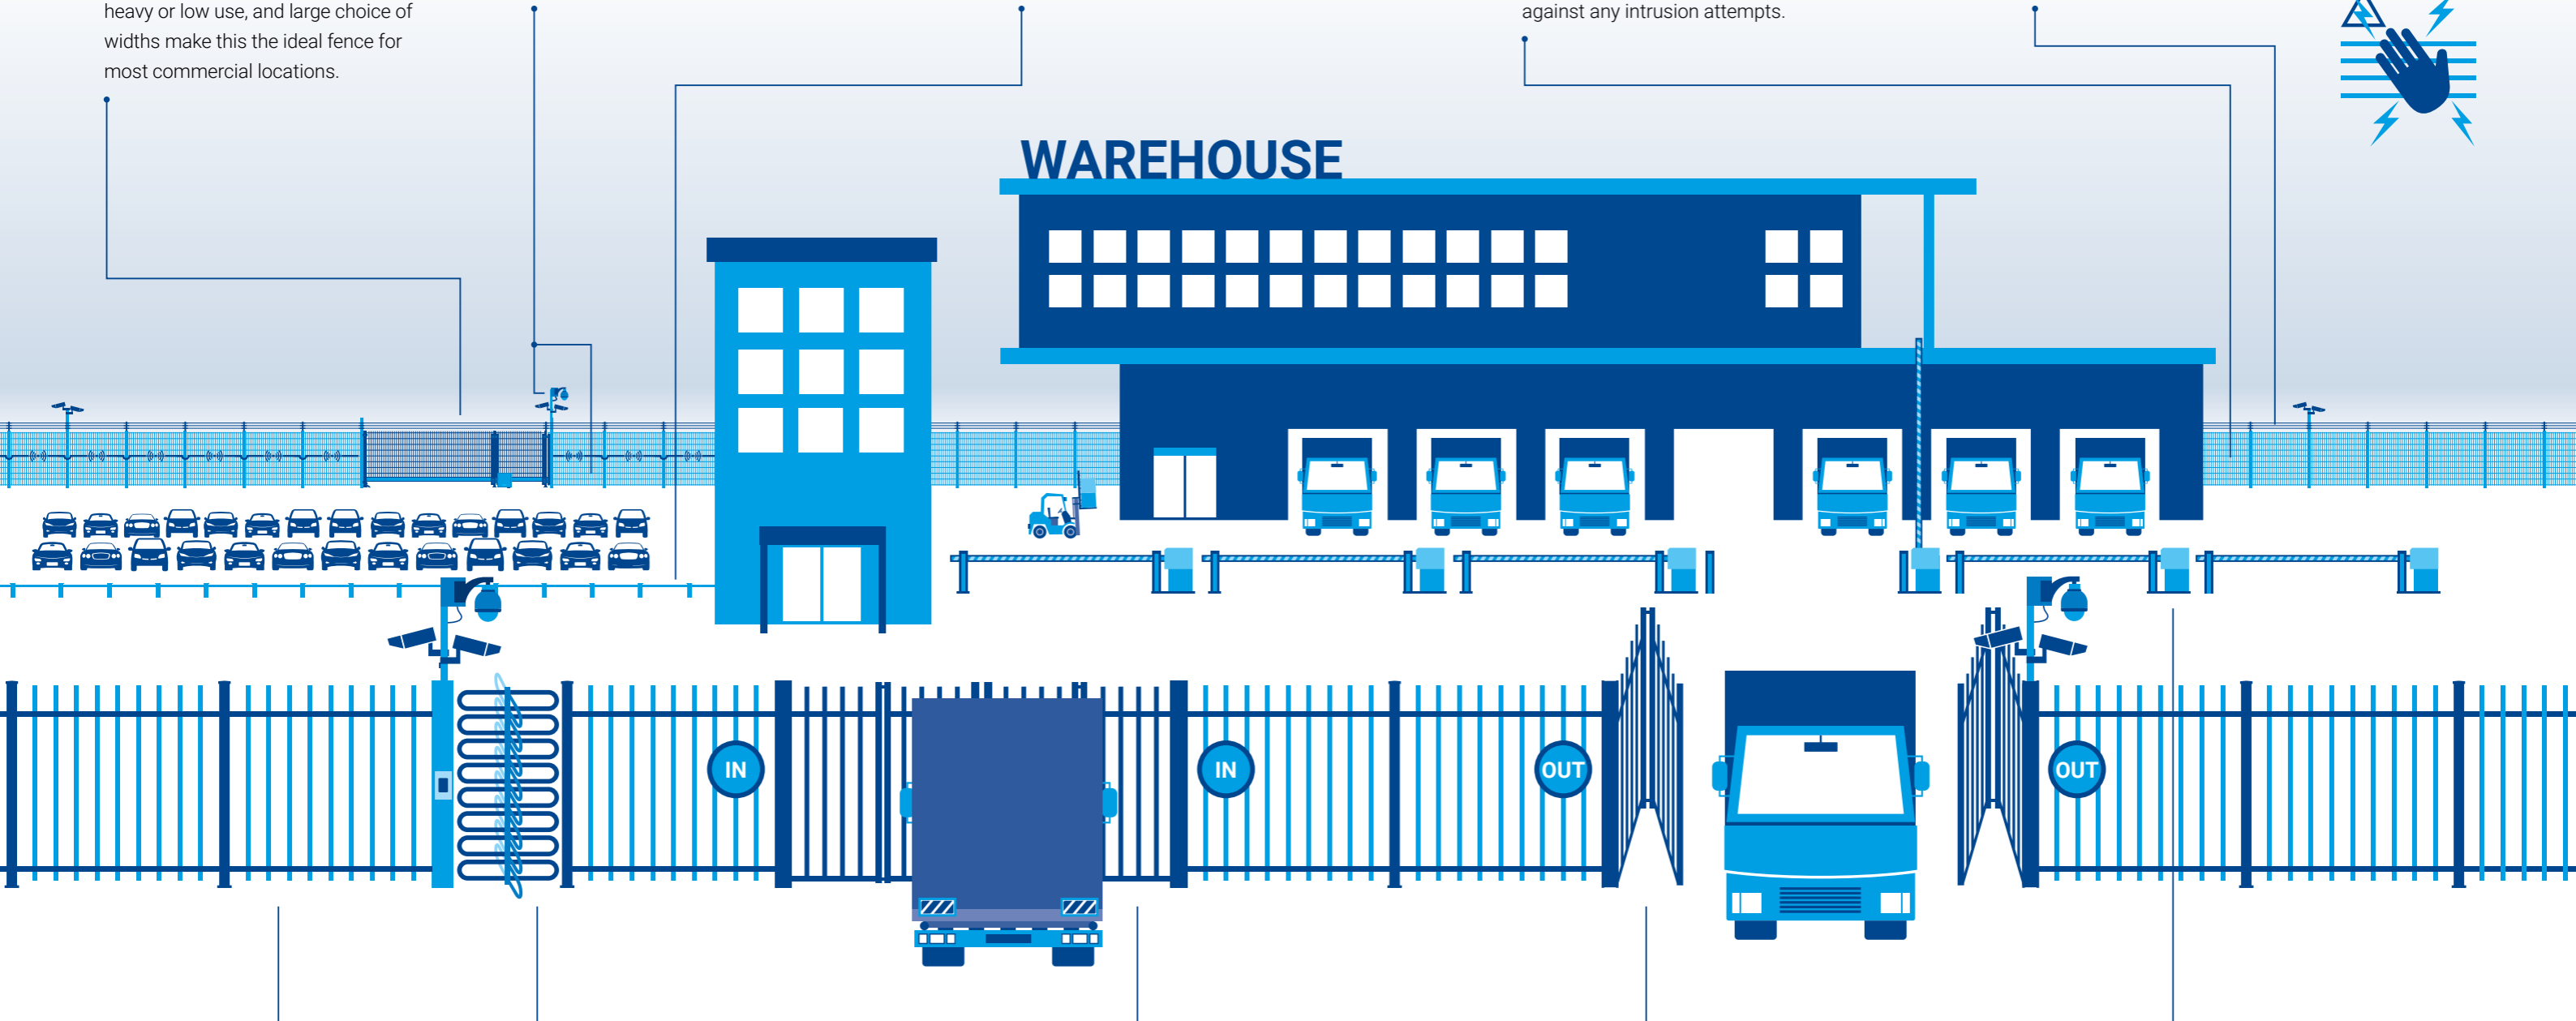

**Sliding gate**  
This safe and extremely robust sliding gate can be configured for all customer needs. Automated or manual operation, heavy or low use, and large choice of widths make this the ideal fence for most commercial locations.

**COS**  
Camera Observation System (COS) to confirm and verify an alarm input from PIDS/Electric fence system.

**Low fence**  
This low fence is an easy and effective solution to clearly mark and segregate the vehicle access paths and parking areas.

**U-profile**  
These welded mesh fences are strong and very difficult to climb. They are easily fitted with detection cables to effectively warn against any intrusion attempts.

**Electric fence**  
This physical shock deterrent stops/detects potential intruders, dissuading them from attempting to breach the perimeter.

**Bar fencing**  
Attractive and secure design is ideal perimeter for high-visibility commercial locations. Because its smooth surface is less vulnerable to moisture and dirt, the fence requires minimal maintenance.

**Turnstile**  
Safe and secure regulated pedestrian entry for individual passage of warehouse personnel.

**Speedgate**  
This folding gate offers a combination of access control, safety, speed and operational reliability. Ideal for very frequent traffic movements.

**Barrier**  
This heavy-duty arm barrier is ideal for high security and high-frequency access locations. Effective as control point for driver acceptance/delivery of goods.
